# GEORGE OZEROV

## Python backend-developer

tg: @georgehuble | whatsapp: @georgehuble | GitHub | +447821383428
george.great47@gmail.com | LinkedInn

Python backend developer with 5+ years of commercial experience building and maintaining backend services and integrations. Experienced in REST APIs, asynchronous processing, and PostgreSQL, using FastAPI, Django, and Django REST Framework. Focused on performance optimization, reliable background processing, testing, and production troubleshooting.

*Skills:*

Python, FastAPI, Django, Django REST Framework (DRF), PostgreSQL, SQLAlchemy, asyncpg, Redis, Celery, Celery Beat, RabbitMQ, asyncio, REST APIs, Pydantic, pytest, Prometheus, Grafana, Sentry, Git, Linux, Docker, Kubernetes, Active Directory, LDAP, Kerberos, SSSD, DNS, CUPS

*Experience:*

** PIK Group - Python Backend Developer*

*November 2022 - August 2026*

Developed and maintained backend and integration services for internal systems, including PDF document processing and data extraction.

- Reduced p95 latency from **700 ms to 300 ms** in a critical application processing workflow by migrating it to **asyncio and asyncpg**.

- Reduced p95 latency from **3 seconds to 300 ms** by implementing **Redis caching** with the cache-aside pattern, also reducing PostgreSQL load.

- Reduced document processing time from **14 seconds to 9 seconds** by optimizing database operations and concurrent task execution.

- Developed **FastAPI REST APIs** and integrations with internal systems, using **SQLAlchemy, Pydantic, and PostgreSQL**.

- Built background PDF processing workflows with **Celery and RabbitMQ**, including task queues, retries, error handling, and status tracking.

- Extracted functionality from a document recognition monolith into a microservice using the **Strangler Fig pattern**. Implemented **Transactional Outbox** and idempotent event processing to prevent event loss and duplicate processing.

- Optimized PostgreSQL queries using **EXPLAIN ANALYZE** and targeted indexes.

- Added **Prometheus metrics, Grafana dashboards, and Sentry** for monitoring and production troubleshooting.

- Wrote unit tests with **pytest**, achieving **85% code coverage**.

**Tech stack:** Python, FastAPI, PostgreSQL, SQLAlchemy, Pydantic, Celery, RabbitMQ, Redis, asyncio, asyncpg, Prometheus, Grafana, Sentry, pytest.

** Astra Group (Astra Linux) - Python Backend Developer*

*March 2021 - September 2022*

Developed components for ALD Pro, a directory service and Linux domain management product.

- Reduced printer setup time from **41 seconds to 23 seconds** by automating device detection and driver installation using **Python and CUPS**.

- Developed workstation monitoring components used across **300+ workstations**, using **Django and Celery Beat** to collect CPU, RAM, network, and system service metrics.

- Stored monitoring history in **PostgreSQL** and implemented notifications to corporate communication channels.

- Implemented asynchronous bulk imports of users and directory data using **Celery and RabbitMQ**, with PostgreSQL storage.

- Integrated Linux systems with **Microsoft Active Directory** using **LDAP, Kerberos, and SSSD**, including SID-to-UID/GID mapping.

- Diagnosed infrastructure incidents involving **DNS, Kerberos, LDAP, and SSSD**.

**Tech stack:** Python, Django, Celery, Celery Beat, RabbitMQ, PostgreSQL, Linux, CUPS, Active Directory, LDAP, Kerberos, SSSD, DNS.

*Languages:*

- **Russian:** Native

- **English:** B2 (Upper-intermediate)
